ABOUT Zebra Instruments™

In 2005, an HVAC/R service technician from Texas discovered the need for a tool that could help technicians quickly diagnose low-voltage control problems in modern ECM HVAC systems. The result was an easy-to-use diagnostic tool known as the ZebraStat. By 2006, the technician closed his service company to keep up with sales and continue developing high quality products for the industry. The award-winning Universal Zebra and the Variable Speed Zebra were developed along with ECM and system surge protection and many other electrical accessories. More than 50 products have been introduced to over 1200 locations across the United States, Canada, and Central America by a dedicated sales force of manufacturer's representatives. *Zebra Instruments*™ is proud to remain a family and veteran owned and operated company from Texas.
